Our Philosophy

Maccaferri Construction provides a fully indemnified and managed design, supply and installation package from inception to completion that is backed by the Maccaferri organisation's global philosophy; "Engineering a better solution".

With 50 years expertise in retaining wall and reinforced soil systems, Maccaferri's client list includes the most respected Civil Engineering Contractors, National and Local Authorities, Commercial and Housing Developers, Infrastructure Owners and Operators.

Sectors

Maccaferri Construction operates across a broad spectrum of industry sectors, including

- Rail
- Leisure
- Marine
- Landfill
- Housing
- Utilities
- Infrastructure
- Erosion Protection
- Commercial/Retail
- Schools/Colleges/Universities
- MOD
- Hospitals
- Industrial

Our Service

In addition to the full Design Supply and Install package, Maccaferri Construction also operates under all current forms of tender including NEC 3 and ECI formats. Maccaferri Construction installs an extensive list of products which enables the company to focus on providing the correct solution for clients.

Maccaferri Construction prides itself in using high quality materials to achieve aesthetic solutions, whilst using its engineering knowledge to ensure value for money.

Application Areas

Maccaferri Construction provides professionally indemnified design and construction solutions through its team of specialists covering:

- Retaining structures
- Reinforced soil slopes/walls
- Erosion protection systems
- Basal reinforcement

Mass Gravity Structures

Mass Gravity retaining walls often provide a cost effective alternative to piled and concrete solutions. Systems include:

- Gabions
BBA certified double twist Gabions and welded mesh Gabions. These can be filled with locally sourced infill stone which is hand placed to exposed faces to ensure a pleasing aesthetic is achieved.
- Timber Crib
Supplied from sustainable sources with FSC certification to ensure chain of custody. The Timber Crib system is a cost effective method of retaining cutting.

Reinforced Soil

With a wide range of reinforced soil systems, Maccaferri Construction can provide the most cost effective solution with the finish required.

Systems include:

- **Gabion Terramesh**

BBA certified Gabion faced reinforced soil system. Offers a vertical or stepped face which is cost effective and rapid to install.

- **Green Terramesh**

BBA certified reinforced soil system for slopes up to 70 degrees. Manufactured with an integral sacrificial formwork that offers a high standard of finish compared to more traditional green faced systems. A wedge of topsoil is placed behind the front face to facilitate a vegetative green finish.

- **MacWall**

Engineered reinforced segmental block retaining wall system of dry laid concrete blocks in combination with Paragrid soil reinforcement geogrids. Blocks are available in a range of colours to compliment adjacent finishes. BBA certified blocks are available.

- **MacRes**

BBA certified Reinforced soil system with concrete panel facing. Available with polymer reinforcement for contaminated or aggressive backfills. A range of form liners are available to provide a variety of finishes.

- **Wrap Faced Reinforced Soil Slopes**

We offer a range of BBA Certified geogrids to suit many soil types, often reusing site won fills to create reinforced slopes and bunds.

Emergency Response Capability

Dalguise, Perthshire, Installation of Prefilled Gabions

Airdrie Bathgate Rail Line, Airdrie, Installed Prefilled Gabions

Prefilled Gabions are manufactured for use in situations where time and/or access is problematic. Maccaferri Construction keeps a stock of prefilled units and can also manufacture on site and in local quarries to meet project requirements.

With a network of specialists throughout the UK and Ireland, Maccaferri Construction can respond quickly to the site of disrupted infrastructure arising from landslips and/or the effects of flooding.

Geomac®

A90, Portlethan during construction Aberdeen, Geomac

A90, Portlethan post construction, Aberdeen, Geomac

BBA certified Reno mattresses filled with a combination of stone and topsoil and topped with an erosion mat to create a contained vegetated slope.

Geomacs can be fastened to soil nailed cuttings, or pinned to shallower slopes. The system has been approved by Transport Scotland.

Erosion Protection

Inveresk, Midlothian, Erosion Protection during Construction

Inveresk, Midlothian, Erosion Protection post construction

Maccaferri Construction installs a wide range of erosion control products including concrete and Gabion mattresses, Geocells, polymer and biodegradable Geomats. These products are often combined to create bespoke solutions.

Prestwick 2 months after completion, SUDS

Maccaferri welded Gabions incorporating structural steel reinforcement to create acoustic walls, visual screens and containment barriers.

Gabion units and Terramesh systems integrated with erosion products to create channels and ponds.

Health & Safety Commitment

The health and safety of everyone involved in, and affected by Maccaferri operations is the company's number-one priority. Ensuring that employees are safe throughout the working day is central to the sustainability of the business. Maccaferri empowers its employees to place their personal safety and that of their colleagues above all other priorities to enable safe delivery of projects.

Environmental Commitment

Maccaferri Construction solutions generate minimal waste, and the company endeavours to use locally sourced labour, plant and materials on all projects. The company aims to reuse site won materials wherever possible.
